How to `pip install -e` multiple python projects *AND* enjoy life

By Dr. Martin Kuric

# Common Practice:

```
git clone <repo-url>           # Download
python -m venv .venv           # Protect system packages
source .venv/bin/activate      # Activate virtual environment
pip install -r requirements.txt # Install dependencies
```

## Why this is not enough:

- VS Code struggles with
